to our knowledge such periodic correlations are obtained and displayed here for the first time. the precessions being induced by unitary matrices the initial 3-tangles are conserved. but our aim is to display how such a constraint leaves room for rich and subtle patterns of periodicity in the correlations involved. we emphasize that such **recurrence plots and unstable periodic orbits** - useful in that they bring out correlations at all scales in a manner that is obvious to the human eye, but their rich geometric structure can make them hard to interpret. in this paper, we suggest that the unstable periodic orbits embedded in a chaotic attractor are a useful basis set for the geometry of a recurrence plot of those data. **random-manifold torandom-periodic depinning of an ...** - sity waves or periodic chains of elastically coupled objects on the other hand display an effective pinning force with periodic correlations with a period m representing the period of microscopic potential in the first case and the lattice spacing in the second case. we use random-periodic (rp) to denote this group. **class 12 run group b -
